Linh Hoang

linhoang.ce@gmail.com · +1 672-272-1375 · linkedin.com/in/linhhoang-awdon · github.com/linhoangce · Portfolio

Technical Skills

Languages & Tools: Python, TypeScript, JavaScript, Java, Kotlin, SQL, HTML/CSS, C, Linux, Git, Docker, GitHub Actions, Jenkins, Agile, Claude Code, Cursor, Codex

Frameworks & Data: FastAPI, SQLAlchemy, React, Next.js, Node.js, Express, Vite, Tailwind, PostgreSQL, SQLite, MySQL, Kafka, Playwright, JUnit, pytest

AI/ML: LLM APIs (OpenAI, Anthropic, Qwen, DeepSeek), MCP, agent tool calling, RAG, PyTorch, scikit-learn, XGBoost, YOLO, DINOv2, Pandas, Streamlit

Cloud: Render, Cloudflare R2, Vercel, Azure, GCP

Work Experience

Co-Founder, Awdon · awdon.app *Jun 2026 – Present*

- Building an AI-native workspace for small software agencies that turns client meeting transcripts into an updated project plan and drafts the reports, minutes, timesheets and emails a team needs, with human approval before sending.
- Architected the FastAPI/SQLAlchemy backend and React/TypeScript front end around a concurrent two-pass LLM pipeline that reconciles each meeting against the project board as id-keyed diffs, with per-action trust tiers and undo.
- Integrated Zoom, Teams, Google Meet, Slack, Gmail/Outlook, GitHub and Jira, plus a VS Code extension, a Claude Code hook and a 15-tool MCP connector for ChatGPT and Claude, with failover across four LLM providers.
- Deploy a single Docker image on Render with SQLite replicated to Cloudflare R2 by Litestream; GitHub Actions runs ruff and a 2,500-test pytest suite on every backend change.
- Grew out of Sidekik, a 4-person Cursor Hackathon Vancouver project (May 2026) that won Best Use of CLōD.

Software QA Engineer, Incognito Software Systems *Jan 2025 – May 2026*

- Owned Jenkins setup and administration, integrating automated test stages into CI/CD pipelines to enable continuous build validation and reliable deployments.
- Built automated test frameworks in Java using Playwright and JUnit, applying object-oriented design to build scalable test architectures for complex, dynamic UI components and API-driven workflows.
- Managed Linux-based (RHEL/CentOS) environments, configuring services, network/firewall settings and system dependencies to keep test infrastructure stable and reproducible.

Project Manager, HAVILAND HOUSE *Sep 2019 – Feb 2020*

- Led the transition of operations and staff from the previous management, growing sales 166%, holding expenses under 25% of budget and beating monthly profit targets by 320%.

Personal & Academic Projects

Planktoneer · OceanHackWeek 2026 *Aug 2026*

- Built solo a harmful-algae watch from 234,930 imaging flow cytometer particles: XGBoost detectors reached 0.84–0.99 held-out average precision on three of four target organisms, with counts tracking expert counts at R^2 0.93, in a Streamlit app.
- Packaged a frozen-DINOv2 pseudo-labelling loop as a tested pipeline (35 pytest tests, GitHub Actions CI) toward the first public, human-verified *Alexandrium* and *Heterosigma* image dataset.

Mini OpenClaw · linhoangce/mini_openclaw *Jun 2026*

- Built an async Python AI assistant gateway for Telegram and CLI with persistent memory, filesystem and shell tools, a chat-ID allow-list, heartbeat check-ins and cron-scheduled jobs over an OpenAI-compatible LLM API.

LexMind · Vibe Coding Hackathon *May 2026*

- Collaborated in a 4-person team to build an AI legal assistant combining OpenAI Realtime voice, specialized AI agents and an Obsidian-compatible Markdown vault for meeting support and knowledge management.
- Developed a secure retrieval-augmented pipeline with server-side client-secret minting and Codex-powered briefing generation from local knowledge sources, winning Grand Prize and Bravo Sponsor Award for Local Business Impact.

Vessel Vision · Ocean Hackathon, Victoria *Oct 2025*

- Collaborated with three teammates to detect and quantify vessel activity from 200,000 unlabeled shore-camera images.
- Labeled a sampled subset of the data; trained, optimized, and deployed a YOLO 11 model with SAHI-enhanced inference on 2,000 images, achieving an F1 score above 0.60 and mAP50–95 of 0.24.

Education

Computer Systems Technology Diploma, Predictive Analytics Option, BCIT *Jan 2024 – May 2026*

Bachelor's Degree in Computer Science (Partial), University of the People *Sep 2021 – Dec 2023*
